**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charley Brown on 5/30/07.

The application has been amended as follows:

In claim 1, line 6, before "determining" insert –to reduce noise in the data series--.

In claim 12, line 6, replace "within" with –outside–,  
line 9, replace "outside" with – within–.

In claim 23, line 7, before "determining" insert –to reduce noise in the data series--.

***Allowable Subject Matter***

Claims 1-25 are allowed.

The following is an examiner's statement of reasons for allowance:

In a method of detecting or predicting a cerebral disorder, using a data series based on a reduced noise data series determined slope or a noise interval within a predetermined range as claimed is not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 3762

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ortel et al (US 2003/0104493) disclose: if it is determined that a value or a slope at or over a particular time in a time-dependent measurement profile is beyond a corresponding predetermined value or slope threshold, then the test sample is flagged as being a sample from an individual with an increased likelihood of having antiphospholipid syndrome in brain tissue.

However, there lacks a teaching or suggestion in Ortel et al to reduce noise in a data series by determining a slope of the data series.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Manuel whose telephone number is (571) 272-4952.
